

WESTbahn

Country: Austria
Sector: Digital Signage
Installed labels: G1 pro 2.7
Start of installation: 2014

OVERVIEW

WESTbahn Management GmbH is a private railway company that has provided passenger transport connections between Vienna and Salzburg since December 2011.

SOLUTION

WESTbahn decided to integrate the PDi Digital solution to make their reservation system more customer friendly. It was the first solution of this kind ever installed in a train with a perfect integration to the existing reservation software.

REALIZATION

The plug & play system made it possible to easily manage the installation during WESTbahn's operating hours and allows for a self-managed maintenance. For WESTbahn, the installation was easy to integrate, quickly available, and economically efficient compared to alternative solutions.

OUTCOME

The resulting increase in customer satisfaction confirmed WESTbahn's decision.
